

2.1 Employee Onboarding & Mandatory Document Collection

2.1.1 Create Employee Profile After Job Offer Acceptance

As an HR staff member,

I want the system to automatically create an employee profile once a candidate accepts a job offer,

so that onboarding and document collection can begin without manual data entry.

When a candidate's status is updated to **Job Offered** and the candidate accepts the offer, the system automatically creates an employee profile.

The profile is pre-filled using information extracted from the candidate's CV and recruitment data (name, email, phone, position). HR can review and edit these details if required.

Acceptance Criteria

- Employee profile is created automatically
- Basic details are pre-filled
- HR can edit employee details
- Employee status reflects onboarding stage

2.1.2 Notify Employee to Upload Mandatory Documents

As the system,

I want to notify the new employee to upload mandatory documents within a given time, so that onboarding does not get delayed.

Once the employee profile is created, the system sends a notification informing the employee that document submission is required.

The notification includes a clear list of required documents and the submission deadline.

Acceptance Criteria

- Notification is sent automatically
- Mandatory document list is visible
- Deadline is displayed clearly
- Progress is tracked visually

2.1.3 Upload Mandatory Documents by Employee

As a new employee,

**I want to upload my required documents through a simple screen,
so that I can complete my onboarding requirements easily.**

The employee navigates to a **“My Documents”** or **“Onboarding Documents”** screen.

For each required document type (e.g., NIC, Birth Certificate, EPF B-Card), the system provides an upload area where the employee can upload files.

Acceptance Criteria

- Employee can upload documents securely
- Uploaded documents are linked to the employee profile
- Status updates to *Pending Review*
- Upload confirmation is shown

2.1.4 Review and Approve Uploaded Documents

As an HR reviewer,

**I want to review uploaded employee documents from a single screen,
so that I can quickly approve correct documents.**

HR navigates to an **Employee Document Review** screen where uploaded documents are listed.

HR can preview each document and approve it if the document is valid.

Acceptance Criteria

- Documents can be previewed
- Approvals are recorded
- Status updates immediately
- Review timestamps are stored

2.1.5 Reject Documents with Reason and Notify Employee

As an HR reviewer,

**I want to reject incorrect documents with a clear reason,
so that the employee knows exactly what needs to be fixed.**

If a document is incorrect, HR clicks **Reject**, enters a rejection reason, and submits it.

The employee is immediately notified and asked to re-upload the corrected document.

Acceptance Criteria

- Rejection reason is required
- Employee is notified
- Document can be re-uploaded
- Status updates correctly

2.1.6 Track Document Completion Status

As an HR staff member,

**I want to see which employees have completed or pending documents,
so that I can follow up where needed.**

The system provides a summary view showing document completion progress per employee.

Acceptance Criteria

- Document progress is visible

- Missing items are clearly indicated
- View updates in real time

2.2 Employee Document & Letter Request Management

2.2.1 Search and View Available Document / Letter Types

As an employee,

**I want to search and view the types of documents or letters I can request,
so that I know what documents are available without asking HR manually.**

The employee navigates to a **“Request Documents”** screen. The system displays a searchable list of available document and letter types such as Service Letter, Salary Confirmation, Employment Confirmation, or Visa Letter.

Acceptance Criteria

- Employee can search document types
- Only allowed document types are shown
- Document descriptions are visible
- Navigation is simple and clear

2.2.2 Submit a Document or Letter Request

As an employee,

**I want to submit a request for a selected document or letter,
so that HR can process it formally.**

When the employee selects a document type, the system opens a request form where the employee can provide necessary details such as purpose, recipient name (if applicable), and urgency.

Acceptance Criteria

- Employee can submit a request successfully
- Mandatory fields must be completed
- Request is linked to the employee profile
- Submission confirmation is shown

2.2.3 View Request Status and History

As an employee,

**I want to view the status of my document requests,
so that I know whether they are approved, rejected, or in progress.**

The system provides a **“My Requests”** screen listing all submitted requests with status and timestamps.

Acceptance Criteria

- Employee can view all past requests
- Status updates in real time
- Request history is preserved

2.2.4 Review Document Requests (Approver View)

As an HR approver,

**I want to review incoming document requests from a centralized screen,
so that I can approve or reject them efficiently.**

HR accesses a **“Document Requests Inbox”** where all pending requests are listed.

Acceptance Criteria

- All pending requests are visible

- Request details are clearly displayed
- Approver actions are restricted by role

2.2.5 Reject Document Requests with Reason

As an HR approver,

I want to reject a document request with a clear reason,

so that the employee understands why the request cannot be fulfilled.

If the approver rejects the request, a text box appears requiring a rejection reason. Once submitted, the employee is notified with the reason.

Acceptance Criteria

- Rejection requires a reason
- Employee receives notification
- Rejection reason is stored
- Status updates correctly

2.2.6 Approve Document Requests and Proceed to Generation

As an HR approver,

I want to approve valid document requests,

so that I can proceed to generate the requested document.

When approved, the request status updates, and the approver can move to document generation.

Acceptance Criteria

- Approval is logged
- Status updates immediately
- Request becomes ready for document generation

2.3 Document Generation, Templates & Signing

2.3.1 Manage Document Templates

As an authorized HR user,

I want to create and manage document templates,

so that documents can be generated consistently without rewriting them each time.

HR navigates to a “**Document Templates**” screen where templates such as Service Letter, Salary Confirmation, or Employment Confirmation can be created or edited. Templates contain fixed text and dynamic placeholders (e.g., employee name, designation, salary).

Acceptance Criteria

- Only authorized roles can manage templates
- Templates can be created and edited
- Placeholders are clearly defined
- Templates can be enabled or disabled

2.3.2 Generate Document from Approved Request

As an HR approver,

I want to generate a document from a selected template after approving a request,

so that the requested document can be created quickly and accurately.

After approving a document request, the approver clicks **Generate Document**, selects a template, and the system automatically fills in known employee details.

Acceptance Criteria

- Template can be selected
- Employee data is auto filled
- Generated document preview is shown

- Document is linked to the request

2.3.3 Edit Generated Document Before Finalization

As an HR approver,

**I want to edit specific parts of the generated document,
so that exceptional cases and custom details can be handled.**

The approver can edit allowed sections of the document (e.g., recipient name, purpose text) before finalizing.

Acceptance Criteria

- Only allowed fields are editable
- Changes are reflected in preview
- Draft can be saved before finalization
- Edited content is tracked

2.3.4 Apply Digital or Physical Signature

As an authorized approver,

**I want to apply a digital or physical signature to the document,
so that documents can be finalized according to organizational policy.**

Before finalizing, the approver chooses whether the document will be digitally signed or physically signed.

Acceptance Criteria

- Signature type can be selected
- Digital signatures are applied securely
- Physical signature option is recorded
- Signature status is visible

2.3.5 Finalize and Publish Document

As an HR approver,

**I want to finalize the document after signing,
so that it becomes an official record.**

Once finalized, the document is locked from further editing and marked as completed.

Acceptance Criteria

- Finalized documents cannot be edited
- Status updates correctly
- Document stored securely
- Audit information recorded

2.3.6 Notify Relevant Parties After Document Completion

As the system,

**I want to notify relevant parties when a document is finalized,
so that everyone involved is informed.**

After finalization, the employee and relevant approvers receive notifications.

Acceptance Criteria

- Notifications are sent successfully
- Employee can view and download document
- Notification history is stored
